Racism

Problems

Racism is the belief that another person is less than human being because of his skin color, language, customs, religion, place of birth or any factor that supposedly reveals the basic nature of that person. According to red card article, racism started to become a more organized trade towards the end of the fourteenth century, when the Europeans began to take people from Africa against their will. Additionally, Britannic's article states the history of racism that In 18th century, the idea of race was invented to magnify the difference between people of European origin and African origin and whose ancestors had been involuntarily enslaved and transported to Americas. In 19th century, racism had been matured and spread all around the world. In many countries, leaders began to think of the ethnic components of their own societies, usually religious and language groups. Since the mid-20th century, many conflicts around the world have been interpreted in racial terms, even though their origins were in the ethnic hostilities that have long characterized many human societies. For example, Arabs and Jews, English and Irish had a conflict related to racism.

factors that racism is being a problem are inequality between people regard to their religion, skin color, culture, belief, language, birth place, and so many things. When we say in equality of religion, some people think that their religion is superior than other, and it leads lack of respecting between people, having a bad attitude on other religion community, and war. One

of the biggest factor is skin color difference, and it caused a lot of problem all over the world for long time since in the 14th century. For example, African and Asian people were trading for white people to be their slave. Even language can cause a racism, that means speaking a popular language is superior than other languages in many ways.

This problem should be solved shortly in order to spread equality all over the world, unless we will not have a good life in different sectors. Such as, it can affect our economy, politics, and socials. Racism can affect our economy in different ways. For example, if we don't develop diversity, we can't get different experience from different people, and we will just follow only one-way system, and that doesn't help us to develop our economy. Also, it affects one nation politically, if we don't diverse our political system. Final racism can affect our social relation. If we don't solve this problem, different people can't get any social interaction. So, we need to find a solution to solve this problem.

Solution

We can solve racism in different ways. According to everyday feminism article, giving awareness for people as this problem is so bad for every one life can solve racism. Awareness can be done by social medias, magazines, books, and schools. We can tell people about racism as it can affect our social life, if we don't respect each other anytime. For instance, when black people met with white people, the black people should respect him, and love him like himself regardless of his race, because he has everything like other people except skin different, but skin doesn't really matter. Also, we should tell people to respect each other in their religion which is Christians should respect Muslims anytime and anywhere like themselves. We can educate people to respect other people's culture to avoid or solve this problem. Moreover, teaching people about language equality can solve racism, so they can respect other language speakers.

Schools are the best solution to solve racism. In school, we can teach people from lower grade to higher grade level about racism. We must tell them the consequence of racism if we don't solve it. For example, it can affect our economy, social life, political, and it can even cause a war among nations. If we teach them, they will not be a racist anymore.

Moreover, government can make a rule about racism violation, in order to reduce and avoid this problem. If government has a strong rule about equality and fairness in any situation, people wouldn't violate the rule, so they don't get punishment, and we can solve the problem technically. Government should give a wariness for higher authorities to serve the country equally and fairly regardless of their race, religion, and gender to avoid racism. Such as, gauges, polices, professors, governors, and others. For instance, gauges must do their work equally and fairly regardless of religion, culture, gender, race, and languages.

As nnedv article states, expanding diversity can eliminate racism. The company should higher any legal people regardless of their culture, religion, races. Also, the school should offer any one who can full fill the requirements regardless of their religion, culture, gender, and race. If we do all of that I mentioned or listed the above, we can solve this problem.

Generally, racism is a belief of people to compare person to person regard to their religion, race, gender so, they can see superiority and inferiority between people. However, racism has so many problems in our life. Such as, economically, politically, and socially. So, in order to avoid these problems, we need to give an awareness for everybody.
